Full Stack Developer

PROFESSIONAL SUMMARY:

- Full Stack Developer with 4 years of experience building scalable web platforms using React, Angular, TypeScript, Java, Spring Boot, and Node.js across enterprise environments on AWS.
- Designed responsive frontend architectures using modern CSS frameworks improving accessibility compliance while deploying solutions on Azure App Services supporting secure, enterprise-grade user experiences.
- Engineered backend microservices using Java, Spring Boot, and RESTful APIs deployed on AWS EC2 with resilient distributed architecture and secure authentication mechanisms.
- Built event-driven, API-first architectures leveraging Azure DevOps and Azure Kubernetes Service alongside Docker and infrastructure-as-code ensuring scalable, maintainable cloud-native deployments across environments.
- Collaborated cross-functionally translating business requirements into secure solutions while applying SOLID principles and implementing CI/CD pipelines using GitHub Actions and AWS CloudWatch monitoring.
- Implemented AI-assisted development workflows using static analysis tools improving development cycle speed by 28% while maintaining clean code standards and automated testing coverage.
- Integrated analytics-ready backend structures with structured logging frameworks leveraging AWS KMS encryption enabling intelligent dashboards and predictive reporting for enterprise stakeholders.
- Developed secure authentication using OAuth2 and JWT enforcing encryption standards, role-based authorization, and API governance across distributed systems hosted on Azure infrastructure.
- Optimized database schemas and query performance using indexing, caching layers, and asynchronous processing enhancing backend responsiveness across Azure and AWS transactional workloads.
- Automated build, test, and deployment pipelines using Azure DevOps and GitHub Actions strengthening release reliability and minimizing manual intervention across multi-environment delivery workflows.

TECHNICAL SKILLS:

- **Frontend** - React.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Responsive Design, REST API Integration, UI Performance Optimization
- **Backend** - Java, Spring Boot, Node.js, Express.js, RESTful APIs, Microservices Architecture, JWT, OAuth2, Asynchronous Processing, API Security
- **Databases** - PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, Schema Design, Query Optimization, Redis Caching
- **Cloud** - Microsoft Azure (App Services, Azure DevOps, Application Insights), AWS (EC2, SNS, SQS, CloudWatch, KMS)
- **DevOps & Tools** - Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, Git, JUnit, Selenium, Cypress
- **Security & Analytics** - Role-Based Access Control, Encryption Standards, Secure API Design, Structured Logging, Monitoring Dashboards, AI-Assisted Development Tools

PROFESSIONAL EXPERIENCE:

Cigna

May 2025 – Present

Full Stack Developer

Responsibilities:

- Designed React and TypeScript member portals improving navigation efficiency by 34% while optimizing bundle performance with lazy loading and strengthening accessibility compliance and secure experiences.
- Developed Angular administrative dashboards reducing manual reporting effort by 24% while standardizing reusable UI components, improving operational visibility, and aligning frontend architecture with enterprise security standards.

- Engineered Spring Boot microservices on Azure App Services reducing API latency by 26% through asynchronous processing, optimized connection pooling, and resilient distributed service orchestration patterns.
- Implemented Azure SQL indexing and query tuning improving transaction throughput by 31% while designing HIPAA-compliant relational models ensuring secure storage and structured patient data access.
- Integrated Azure Service Bus messaging and circuit breaker patterns improving service fault tolerance by 21% during third-party outages while strengthening microservices reliability.
- Built monitoring dashboards using Application Insights reducing production incidents by 22% while enabling proactive diagnostics, structured logging, and performance visibility across healthcare systems.
- Created CI/CD pipelines in Azure DevOps improving deployment consistency by 37% while enforcing gated builds, automated JUnit and Cypress regression testing, and release governance controls.
- Refactored monolithic applications into Docker containerized services reducing infrastructure overhead by 29% while enhancing scalability, portability, and cloud-native modernization across Azure environments.
- Implemented Redis caching improving session response performance by 33% during high concurrency scenarios while optimizing backend efficiency and strengthening member access reliability.
- Structured secure RESTful APIs with OAuth2 and Swagger documentation improving vulnerability detection coverage by 19% while enabling AI-driven risk analytics integration and developer onboarding standards.

JPMorgan Chase

Jun 2022 – Dec 2023

Full Stack Developer

Responsibilities:

- Developed secure React trading dashboards improving trader workflow efficiency by 23% while building reusable UI libraries and optimizing memoized component rendering across high-volume financial interfaces.
- Built Java Spring Boot APIs reducing reconciliation delays by 18% while enhancing backend maintainability using dependency injection, repository abstraction, and performance profiling across transaction services.
- Implemented JWT authentication and multi-factor authorization with AWS KMS encryption ensuring banking compliance while reducing abuse risks by 20% using API rate limiting controls.
- Designed event-driven integrations using AWS SNS and SQS reducing inter-service dependency risk by 21% while strengthening distributed module decoupling and transaction reliability.
- Enhanced backend indexing strategies improving complex query performance by 25% within portfolio systems while optimizing high-volume transaction orchestration and database scalability.
- Containerized microservices using Docker and orchestrated Kubernetes deployments improving infrastructure portability while integrating CloudWatch alerts for proactive anomaly detection across systems.
- Automated CI/CD workflows using GitHub Actions improving release cadence by 35% while enforcing audit traceability, Selenium regression validation, and consistent multi-environment deployment governance.
- Collaborated with risk analytics teams exposing structured APIs supporting predictive fraud detection while strengthening secure compliance frameworks and enabling scalable financial data integrations.

Kroger

Jan 2021 – May 2022

Software Developer Engineer

Responsibilities:

- Developed Angular inventory dashboards improving warehouse visibility accuracy by 28% while enhancing frontend responsiveness through dynamic data binding reducing page latency by 21% across operational interfaces.
- Built Node.js REST APIs reducing order processing turnaround time by 19% while integrating backend validation logic ensuring transactional integrity across supply chain lifecycle management systems.
- Designed relational database schemas reducing redundancy by 22% while implementing caching mechanisms enhancing frequently accessed product query performance across enterprise retail catalog platforms.
- Implemented batch processing jobs reducing nightly reconciliation windows by 26% while enhancing structured logging to accelerate root cause identification across distributed inventory services.
- Integrated third-party vendor APIs improving procurement automation efficiency by 17% while strengthening API security through input sanitization across customer-facing retail endpoints.

- Automated backend testing using JUnit minimizing regression defects while improving overall system reliability across production deployments supporting high-volume retail operations.
- Assisted DevOps automation workflows improving release coordination across staging and production environments while supporting Agile sprint planning, backlog refinement, and cross-team collaboration initiatives.
- Contributed to continuous performance optimization initiatives aligning application scalability, logging visibility, and operational metrics with retail business growth objectives and enterprise engineering standards.

Certifications:

- Oracle Certified Associate – Java SE 8 Programmer
- J.P. Morgan – Software Engineering Job Simulation (Forage)
- NVIDIA – Fundamentals of Deep Learning
- AWS - Certified Solutions Architect Associate

Educational Details:

Master of Science in Computer Science - Auburn University at Montgomery

Bachelor of Technology in Computer Science - CMR Institute of Technology
